

TIBOR SIGNATURE SERIES

CLEANING

After each use, back off the drag completely and rinse the reel thoroughly with fresh, warm water giving special attention to the backing and the perforations in the Spool. (Do not let the reel soak). The reel should be shaken to remove excess water and left in an open area (indoors) to dry overnight. The following day, put the reel through all of its drag settings and then return to free spool for storage. Periodically, especially after extensive exposure to saltwater, the line and backing should be removed and wiped down with a wet cloth to remove salt.

When the reel, line and backing are completely dry, the reel should be stored in its protective pouch.

MAINTENANCE

All reels are lubricated at the factory prior to assembly and relubrication is generally not necessary. Should you wish to disassemble your reel for cleaning and/or relubrication, insert a penny into the Drag Adjustment Stop Nut; unscrew and remove the Nut. Unscrew the Drag Adjustment Knob and remove. Turn the Spool backwards (against the drag) until it moves freely. Remove the Spool. (Do not unscrew the Signature End Cap). Clean as necessary and reassemble. If you wish to lubricate the Cork Drag Disc, use only a small amount of Tibor Graphite Lube.

Please note: Monofilament line is not recommended for use on Tibor reels. Should you have any questions about line for your reel, please contact your authorized Tibor dealer.

CONVERSION FROM RIGHT TO LEFT HAND RETRIEVE

Tibor Signature reels are shipped from the factory with right hand retrieve unless specified. An authorized dealer can easily convert any Tibor reel from right to left hand retrieve for you. You may also convert the reel yourself by reversing the Clutch Dogs. Please refer to the numbered parts list on the reverse side:

1. Insert a penny into the Drag Adjustment Stop Nut (Part #1), unscrew and remove the Nut. Unscrew the Drag Knob (Part #2) and remove.
2. Separate the Spool from the Frame.
3. Locate the three Clutch Pins (Part #13) at the base of the Main Shaft (Part #15). Depress and rotate the Clutch Pins 180° from the factory setting for left hand retrieve.
4. Mate Spool and Frame. Replace Drag Knob and tighten all the way down. Replace Stop Nut and tighten with a penny.

TIBOR REELS
The World's Finest Fly Reels

TIBOR SIGNATURE SERIES

All replacement parts are available though your local Tibor dealer. A selection of replacement parts is also available for purchase online at tiborreel.com.

When ordering parts, please specify color, model name, part name and part number.

Easy conversion from right to left hand retrieve: Simply depress the three Clutch Pins (part # 7SX) with a small flathead screwdriver and rotate 180°.
